Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from An Introduction to Logic: From the Standpoint of Education This book is designed for those whose concern is with Education. It describes the main aspects of the thinking process with the view of giving the teacher a clear idea of the fundamental things to aim at in getting the child to think. Certain features perhaps call for a word of explanation. I have endeavoured to begin at the standpoint of the person who is ignorant of Logic, and to familiarise him with the thinking process before proceeding to analyse it. In so doing, I have had in view the method of teaching by which the student is led to construct his own science by his own efforts, in discussion with the teacher. It follows that the exercises form an integral part of the text. They deal as far as possible with problems which arise in school work. They are intended, of course, to test the student s knowledge; but their main purpose is to suggest topics for discussion between the teacher and his pupils. Hence they contain matter which would usually have been treated in the text. But in my opinion the text itself represents results to be gained by the student in discussion, rather than points to be put to him in monologic exposition. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work.
