RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Original publisher: Salt Lake City, Utah: U. S. Dept. of the Interior, U. S. Geological Survey, 2005. OCLC Number: (OCoLC)58475995 Subject: Seepage -- Utah -- Escalante River Watershed. Excerpt: . . . Seepage Investigation of the Escalante River Drainage Basin 9 90 Creek COND Boulder 80 Creek Creek SE from 70 Calf Sand PER Inflow from from 60 Creek FEET Inflow Inflow Mamie 50 UBIC from 40 Inflow C IN STREAMFLOW, 30 1981 20 10 2001 0 0 5 10 15 20 DISTANCE DOWNSTREAM FROM SITE 10, IN MILES Figure 2. Streamflow on October 21, 1981, and October 23, 2001, along the Escalante River, Garfield and Kane Counties, Utah. Regional Climate Center, 2004). These comparisons Perennial or base flow in Mamie, Sand, and Calf indicate that conditions preceding the 1981 seepage Creeks appears only slightly affected by changes in investigation were wetter than conditions preceding precipitation prior to October 1981 and October 2001. 2001. Cumulative departure is the sum of difference However, flow in Boulder Creek seems to have been between each month or years measured precipitation affected by the less-than-normal precipitation prior to and the long-term average, and describes the collective October 2001. Perennial or base flow in Mamie, Sand, affects of climatic trends. The table below summarizes and Calf Creeks originates mainly as ground-water the departures. discharge from the Navajo aquifer. A component of perennial flow in Boulder Creek is also derived from the Navajo aquifer. A partial explanation for the Departure from long-term average precipitation at Escalante, Utah variation in perennial flow measured at the mouth of Amount above Boulder Creek is that the additional flow measured in Time period () or below (-) 1981, is derived from shallow circulating ground...
